# Django ORM

Object-relational mappers

What is SQL

- SQL means Structured Query Language

- Is the language that the SQL databases understand

- We write SQL statement to get data from the database

- SQL databases are relational databases

- PostgresSQL is a relational database

Finding Users

- Lets get all the users that are from Colombia

- Lets order them by created date

```sql
SELECT * FROM users WHERE country="colombia" ORDER BY created_date
```

```
User.objects.filter(country="colombia").order_by('created_date')
```

Django ORM

```
User.objects.filter(country="colombia").order_by('created_date')
```

=

```
SELECT * FROM users WHERE country="colombia" ORDER BY created_date
```

- You write Python

- Django Translates

- The DB gets SQL
